## I. VIETNAM'S SOCIO-ECONOMIC OVERVIEW

## 1/ Growth of Gross Domestic Product (GDP)

The Gross Domestic Product (GDP) growth in the first quarter of 2024 reached 5.7% compared to the same period last year, marking the highest growth rate in the first quarter during the period of 2020 – 2023, providing a positive signal following the challenges of 2023. All three sectors including Industry and Construction; Services; Agriculture, Forestry, and Fisheries witnessed upticks compared to the same period in 2023. However, there were variations in growth rates among these sectors compared to the targets set forth in Resolution 01/NQ-CP. Among them, the Industry and Construction sector exhibited the strongest improvement among the three sectors (approximately 6.3%, with the industrial sector alone increasing by 6.18%), significantly surpassing the targets set in the Resolution (5.5%). The other two sectors also experienced positive growth, albeit at lower rates compared to the targets outlined.

GDP Growth by Sector and Quarter, 2018-24 (%)

Source: General Statistics Office of Vietnam - GSO

## 2/ Situation of Foreign Direct Investment Attraction

The flow of FDI is gradually shifting on a global scale. Before the pandemic, Europe, Asia, and North America were competing to attract this capital, with Europe and North America often being the largest destinations for FDI. However, observations show that FDI flows into the Asian region are steadily increasing, especially during the Covid-19 pandemic when FDI into other regions decreased, Asia continued to experience good growth rates. As of 2022, Asia has been the largest recipient of FDI globally (accounting for over 50% of total global FDI with a CAGR of around 5%). With the significant growth potential of countries in the region, it is forecasted that Asia will remain an ideal destination for FDI in the future.

Global FDI attraction by regions (Million USD)

Source: UNCTAD

FDI attraction in Asia by region (Unit: Million USD)

Attracting FDI in the Asian region is currently led by East Asian countries (primarily China, Hong Kong, and Japan). Southeast Asian countries are currently in second place in attracting FDI in the region. Especially, achieving a good growth rate in 2021 (79%), and maintaining a slight growth in 2022 while East Asia saw a slight decrease in FDI inflows, Southeast Asia still maintained a modest growth rate (5%). Vietnam ranks third in the region in attracting FDI, after Singapore and Indonesia.

FDI attraction in Southeast Asian countries (Unit: Million USD)

Source: UNCTAD

As of the end of 2023, total foreign direct investment (FDI) into Vietnam reached \$36.6 billion, marking a 32.1% increase compared to 2022 and nearing the \$38 billion milestone before Covid-19 (in 2019). In terms of the total FDI realized, 2023 recorded the highest figure since 2019, reaching \$23.2 billion.

Total Registered and Realized FDI Capital, 2019-23 (USD Billion)

Source: Ministry of Finance (MOF)

Resuming the growth momentum from 2023, the total newly registered capital in the first quarter of 2024 surged significantly, reaching \$4.774 billion, a growth rate of 38.4% compared to the same period last year. Meanwhile, total adjusted capital has been continuously decreasing since 2022, reaching only \$934.6 million in the first quarter of 2024, a decrease of 40.9% compared to the same period last year, indicating that foreign investors tend to maintain their production and business scales while reducing expansion activities due to lingering uncertainties about the prospects of the global and regional economies.

On the other hand, the total number of projects in the first quarter of 2024 has been on the rise since 2021, reaching 644 projects, an increase of 9.2% compared to the same period last year. This growth reflects Vietnam’s attractiveness to foreign investors, which remains strong thanks to advantages such as a skilled workforce, competitive labor costs, stable business environment, strategic location, export-oriented economy, and a series of signed FTAs (Free Trade Agreements).

Newly Registered Capital, Registered Capital for Adjustment and Total Number of FDI Projects, 2019-24 (USD Million)

Source: General Statistics Office of Vietnam - GSO

### 3/ Purchasing Managers' Index (PMI) & Index of Industrial Production (IIP)

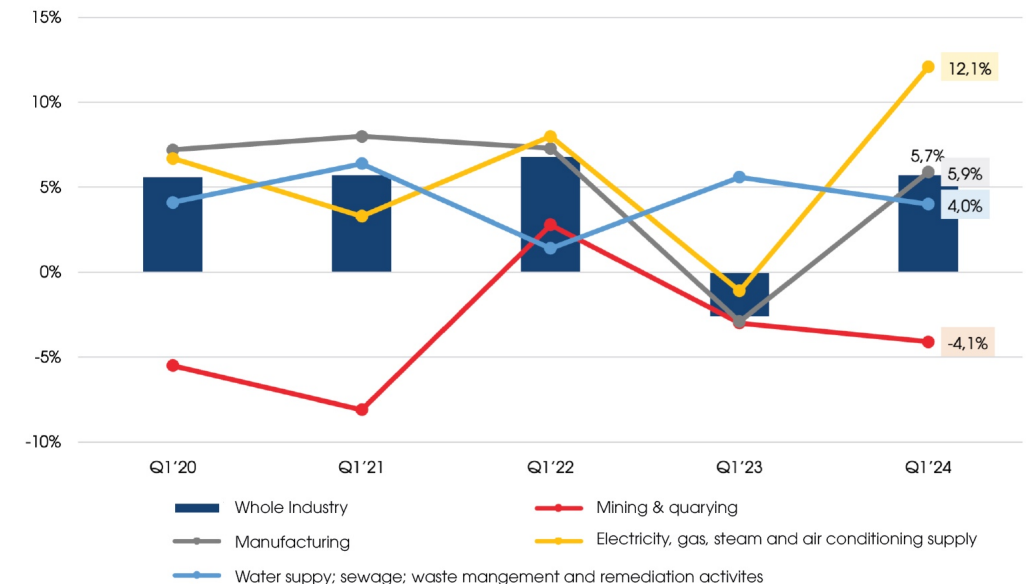

After experiencing slight improvement in the first two months of 2024, the Purchasing Managers' Index (PMI) dropped below the 50-point threshold in March, reaching 49.9 points. This reflects a slowdown in Vietnam's manufacturing sector growth in March, as global demand continues to decline, restraining the momentum of new orders. Additionally, the volume of export orders also decreased to the lowest level since July 2023 due to competitive pressures and geopolitical conflicts. However, according to S&P Global, manufacturers are increasingly confident that production will improve within the next year.

Regarding the Index of Industrial Production (IIP), the first quarter of 2024 witnessed a significant improvement in the Processing and Manufacturing sector, with a growth rate of 5.9% compared to -2.9% in the first quarter of 2023, reflecting a partial economic recovery. This improvement was particularly evident in the first two months of 2024, as indicated by the PMI exceeding the 50-point threshold due to an increase in the number of new orders signed with manufacturers.

Purchasing Managers' Index (PMI) by Month, 2023-24

Growth of Index of Industrial Production by Quarter, 2020-24

## 4/ Situation of Exports & Imports

The total import-export turnover in the first quarter of 2024 reached \$178.040 billion, the highest level for the first quarter in the period of 2020 – 2024, indicating a revitalization of international trade activities since the onset of the Covid-19 pandemic in 2020 and amidst a challenging year like 2023. The trade surplus continued its growth momentum since 2022, reaching \$8.080 billion in the first quarter of 2024, a 98.5% leap compared to the same period last year. The FDI sector remained the primary export sector with a 69.2% share of the total import-export turnover in the first quarter, growing by 13% in value compared to the first quarter of 2023, achieving a trade surplus of \$12.57 billion. The domestic sector, on the other hand, incurred a trade deficit of \$4.49 billion.

High-value-added items such as Electronics and Telephones maintained their positions as the top two export commodities in Vietnam’s market in the first quarter of 2024, accounting for 23.2% and 20.7% of the export value respectively, with growth rates of 30.3% and 9.7% in value compared to the same period last year, driven by increasing demand for these goods.

**10,312** USD Million

↑ 12,1%

## 5/ The number of enterprises in the Manufacturing and Construction industries

The number of enterprises ceasing operations reached a dominant figure in both the Manufacturing and Construction industries, with increases compared to the same period last year at 19.5% and 15.7% respectively, indicating significant ongoing challenges in the business landscape. Particularly in the Construction industry, the number of enterprises ceasing operations reached the highest figure (7,064 enterprises) within the Industry & Construction sector, while the number of enterprises returning to operations decreased by 1.2% compared to the same period last year due to difficulties in the real estate market and capital market. Specifically, comparing the number of newly registered and returned-to-operation enterprises with the number of enterprises withdrawing from the market, in the first quarter of 2024, the total number of Construction enterprises decreased by 518, while the number of Manufacturing enterprises increased by 273.

Situation of Enterprises in the Manufacturing and Construction industries, Q1 2024

Source: General Statistics Office of Vietnam - GSO

## **II. STATUS OF NEWLY REGISTERED INDUSTRIAL CONSTRUCTION PROJECTS IN QUARTER I/2024**

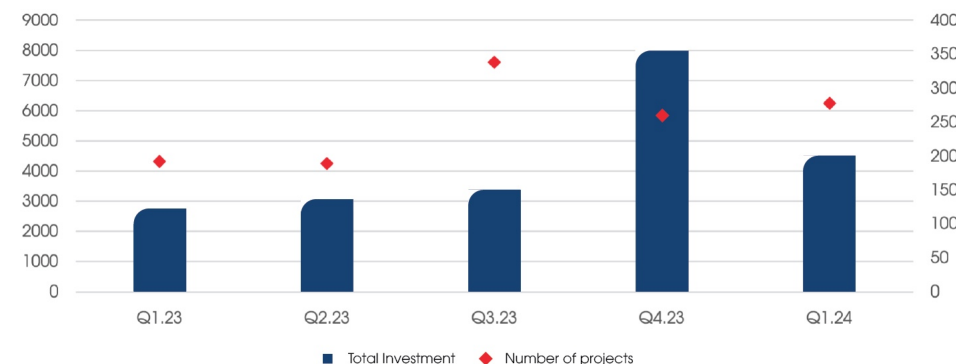

The analysis is based on data from newly registered foreign direct investment (FDI) projects in the following sectors: manufacturing; warehousing and transportation; agriculture; production, distribution of electricity, gas, water, air conditioning; and construction with leased workshops or land within and outside industrial zones.

## 1 / The number of newly registered projects in Quarter I/2024 increased compared to the same period

In the fourth quarter of 2023, the number of projects attracted to Vietnam decreased compared to the third quarter, but the total investment amount increased significantly. The investment attraction situation in the first quarter of 2024 increased compared to the first quarter of 2023, with new FDI projects in the first quarter of 2024 showing a clear growth. Vietnam is increasingly affirming its potential to attract large investments, especially for large-scale projects, which are considered a top priority in the national economic development plan.

The number of newly registered FDI projects continues to be concentrated mainly in the Northern region, with over 50% of projects, both in terms of quantity and registered capital, focused here. The Southern region accounts for approximately 30-40% of projects in terms of quantity and registered capital, while the Central region accounts for less than 10%. The Northern region remains a strong attractor of new FDI projects in the first three months of this year, but the Southern region has also attracted some large-scale projects, such as: the Bio-Bdo biological product manufacturing plant project; the Boe Vietnam Phase 2 smart terminal equipment project; the Tripod Vietnam electronic factory project (Chau Duc),...

## 2/ Analysis of investment projects by type of investment

“ According to data from the HOUSELINK system, in the first three months of 2024, land lease projects accounted for a significant proportion, with over 60% of newly registered construction land lease projects. The number of land lease projects in the first quarter of this year also nearly doubled compared to the same period in 2023

”

Newly registered industrial projects by number of projects in the first 3 months of 2024

### 2.1. Factory rental projects trend

In the period from 2023 – Q.I/2024, the factory rental projects reached the peak in the number of projects in the third quarter of 2023. By the fourth quarter of 2023, the number of projects started to decline, and in the first quarter of 2024, there is a slight upward trend. The number of factory rental projects is still maintaining an increasing trend up to now. However, when considering the proportion of factory rental projects out of the total number of newly registered projects, there is also a downward trend. Even during Quarter III/2023 when the number of factory rental projects reached its highest, the proportion over the total number of projects still decreased, and this trend has persisted until now. It can be observed that after a period of booming workshop rental projects driven by investors needing to quickly operationalize to meet order demands, this trend is now showing signs of slowing down and gradually decreasing.

The average capital of factory rental projects per quarter fluctuates around 3 to 5 million USD, with not much variation between quarters. The lowest capital for factory rental projects from 2023 to 2024 ranges from 0.03 million USD to 0.17 million USD. Meanwhile, the highest capital shows significant differences between quarters, especially in Quarter I and Quarter III of 2023, where the highest capital for factory rental projects exceeded 130 million USD, while in other quarters it was above 25 million USD.

Source: HOUSELINK Data

Source: HOUSELINK Data

## 2.2. Land lease projects trend

From the beginning of Quarter 1 in 2023 to Quarter 1 in 2024, land lease projects have been on the rise. The peak was in Quarter 3 of 2023 when the number of land lease projects doubled compared to Quarters 1 and 2 of 2023. The demand for land lease continues to be driven in Quarter 1 of 2024 due to the ongoing trend of shifting manufacturing bases from China to Vietnam, especially in the electronics industry. At the same time, the proportion of land lease projects over the total number of registered projects is also increasing (consistently exceeding 50% in the past three quarters).

Source: HOUSELINK Data

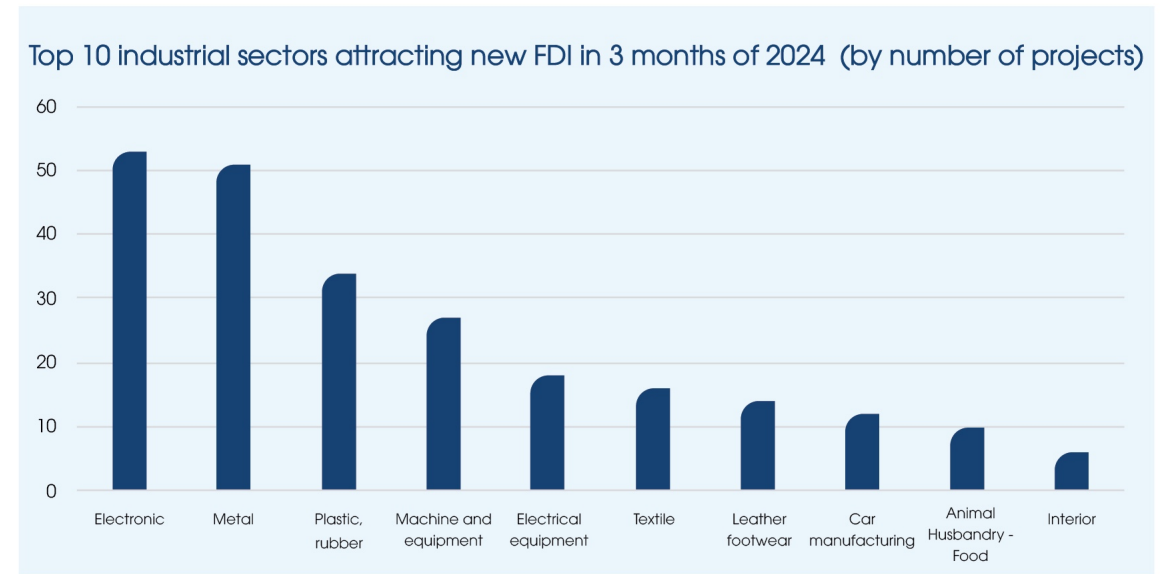

Source: HOUSELINK Data

### 3/ The main sectors attracting FDI

The electronics industry leads the top 10 sectors attracting investment projects in the first three months of 2024, with these projects mainly concentrated in the Northern region. Over the past two years, due to the government’s clear policies in attracting investment with strict criteria for selecting investment projects based on both quality and quantity, there hasn’t been much change in the sectors attracting investment. Ranking second are projects in the metal industry, followed by the plastic-rubber and machinery equipment sectors. Particularly, the automotive manufacturing sector also appears in the top 10 sectors attracting investment in the first three months of 2024 (primarily projects producing automotive components). Although the textile and garment, and leather and footwear industries have decreased both in the number of investment projects and registered capital, they still remain among the top 10 industries attracting the most investment in Vietnam in Quarter I/2024.

### **III. SITUATION OF ATTRACTING INDUSTRIAL PROJECTS IN 5 YEARS (From 2019 to present)**

In this part, we focus on analyzing investment projects from land lease FDI and DDI resources on the HOUSELINK system (each project has an investment capital from 02 million USD upwards). All projects have been verified.

## 1/ Investment project growth trend

In 2023, HOUSELINK database system recorded 825 FDI industrial land lease projects at capital level of 2 million USD and more, an increase of 28% compared to 2022 and the highest in the last five years, although the total investment decreased slightly (14% compared to 2022). The impact of the COVID-19 pandemic and global geopolitical issues also affected the industrial investment trend, resulting in a slight decrease in the number of industrial land lease projects with capital over 2 million USD in Vietnam from 2020 to 2022, although the reduction was not significant. In 2023, there has been an improvement and growth in the number of projects. The highest total investment was recorded in 2021 due to several large investment projects that year.

In the first quarter of 2024, the number of projects attracting industrial land lease investments over 2 million USD increased by 28% in terms of quantity and 49% in terms of total investment compared to the same period in 2023. The number of projects attracted in Q1 2024 recorded the highest figure for Q1 since 2019. These positive attraction figures demonstrate that Vietnam is an ideal destination for industrial investment projects. Improvements in the investment environment, strengthened infrastructure capabilities, and strong investment attraction policies have helped make industrial investment a highlight of the Vietnamese economy.

Source: HOUSELINK Data

Source: HOUSELINK Data

## 2/ Proportion of investment by capital source

According to HOUSELINK, in terms of the number of projects, most industrial land lease projects with capital over 2 million USD were invested using FDI. In terms of the proportion of different types of investment capital, before the COVID-19 pandemic, the proportion of FDI accounted for a high percentage of the total investment. However, in 2021 and 2022, the share of DDI increased mainly due to Thaco’s bauxite mining project, which had a total investment of over 2 billion USD. In 2023, FDI projects showed a clear recovery, leading to an increase in the proportion of FDI investment projects, accounting for 67% of the number of projects and 73% of the total investment.

Proportion of capital by total investment capital, 2019 - 2023

Proportion of capital by number of projects, 2019 - 2023

Based on the HOUSELINK system, projects with a capital of over 2 million USD have been heavily invested in by domestic investors, currently holding the highest proportion in terms of both quantity and total investment capital from 2019 to present. Following this, Chinese FDI stands as the second-highest source of investment in Vietnam. Although the number of U.S. FDI projects is small, the scale of the investment projects is very large, placing the United States among the top five sources of investment in Vietnam. In terms of the number of projects, after China, South Korea, Taiwan, and Japan rank third, fourth, and fifth respectively in terms of the number of projects attracting investment into Vietnam.

In the first quarter of 2024, DDI projects still dominate the majority of industrial investment projects over 2 million USD in Vietnam. Following them are Chinese FDI and South Korean FDI. DDI and Chinese FDI are currently holding the largest share of investment in Vietnam, accounting for nearly 70% of the market. Observations show that DDI has the largest change in market share, increasing by 8% compared to the fourth quarter of 2023. Chinese FDI and Taiwanese FDI have seen decreases in the number of investment projects (decreasing by 3% and 8% respectively compared to Q4/2023). Investments from South Korea and Singapore have recorded slight increases (1% and 1.4% respectively).

### 3/ Top sectors attracting investment

According to HOUSELINK's records, from 2019 to the present, the electronics industry has been the most attractive sector for industrial projects, followed by textile and garment projects and agricultural food projects. The difference between sectors is not significant because during the years 2019 and 2020, textile and garment investors still heavily invested in Vietnam despite the decreasing growth rate trend. Logistics centers and plastic manufacturing plants also rank among the top sectors attracting the most investment during this period. While agricultural and food factories are mainly invested in by DDI sources, other sectors are dominated by FDI sources.

## IV. OVERVIEW OF THE SITUATION OF INDUSTRIAL PROJECTS UNDER PREPARATION FOR CONSTRUCTION IN VIETNAM

*In this section, we focus on analyzing investment projects funded by FDI and DDI sources with investments of \$2 million or more, which we have verified on the HOUSELINK system and are currently in the process of preparing for construction (Project preparation, Design, Bidding, Contractor selection) based on criteria such as: Construction type, Location, Project type, Investment form.*

## 1/ Construction type

According to data from the HOUSELINK system, we observe a significant difference in total investment between expansion projects and new construction projects, but the number of projects does not differ much. New construction projects, in particular, have a higher proportion both in terms of quantity and total investment. Both types of construction involve the presence of large projects, although the number of such projects is not extremely high. Through attracting new projects along with their superior capital compared to expansion projects, we can see the confidence of new investors in joining production alongside the significant development potential in the Vietnamese market.

Overview of construction preparation projects by project type

Source: HOUSELINK data

## 2/ Location of project implementation

HOUSELINK data indicates that the majority of projects preparing for construction are concentrated in the Northern region, primarily in provinces such as Bac Ninh, Hai Duong, and Hung Yen. This region is also home to many large investment projects nationwide. The number of projects in the Central region is the lowest among the three regions. However, the Central region has the characteristic of being an investment destination for many energy projects, pushing the investment capital scale of projects in this region to the highest among all three regions.

Allocation of construction preparation projects to each region (by number of projects)

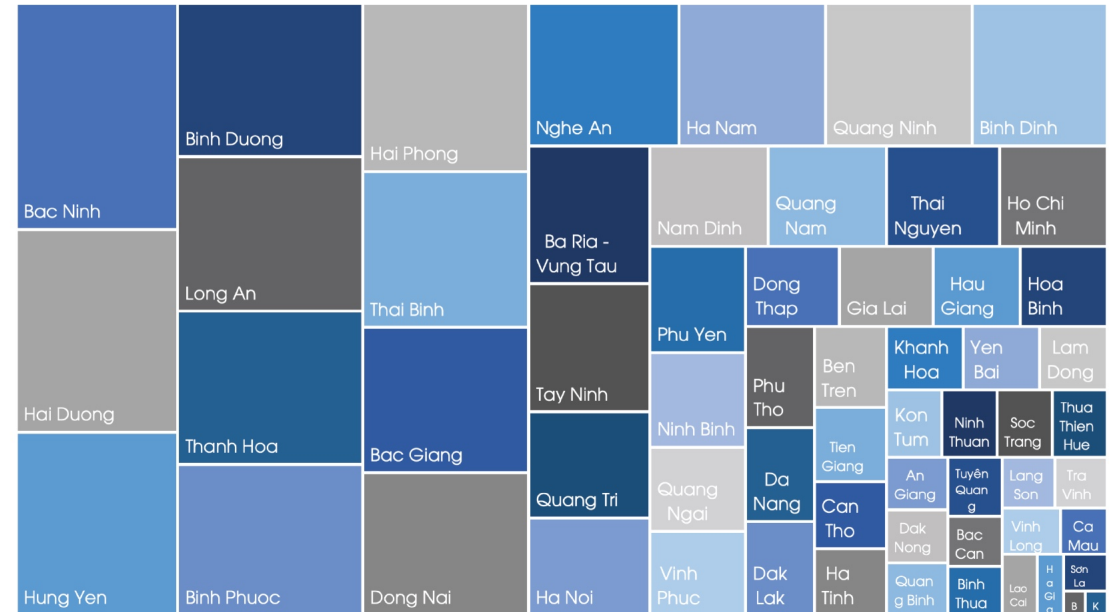

Allocation of construction preparation projects to each region (by total investment capital)

Source: HOUSELINK Data

Allocation of construction preparation projects to each province (by number of projects)

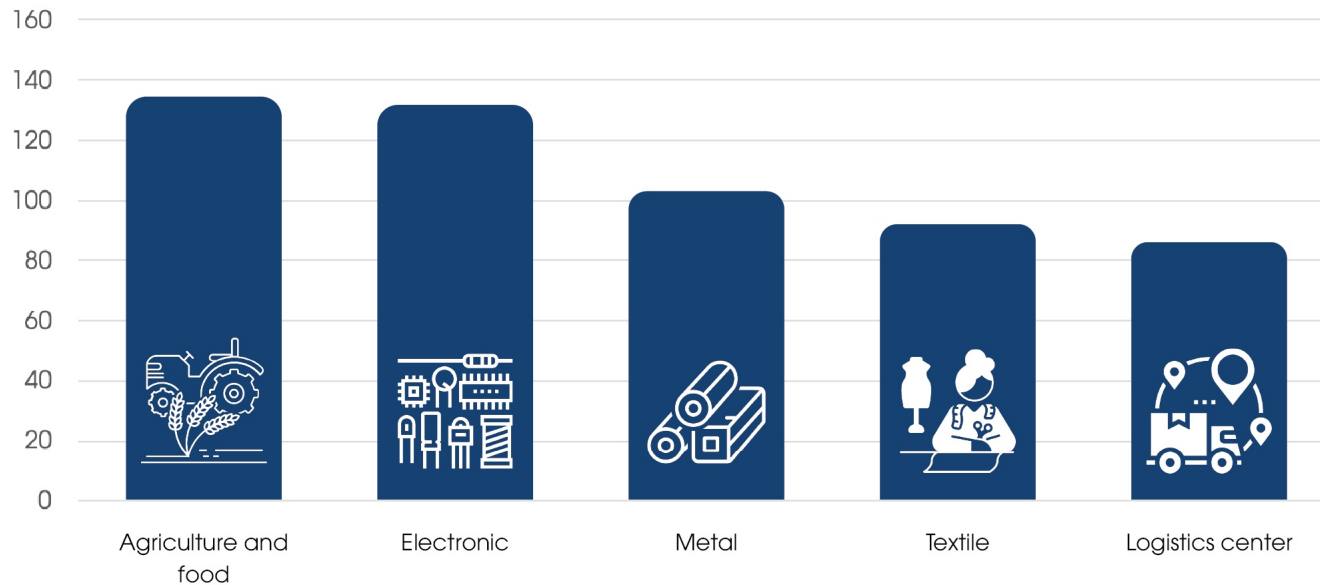

Source: HOUSELINK Data

### 3/ Top industries of projects

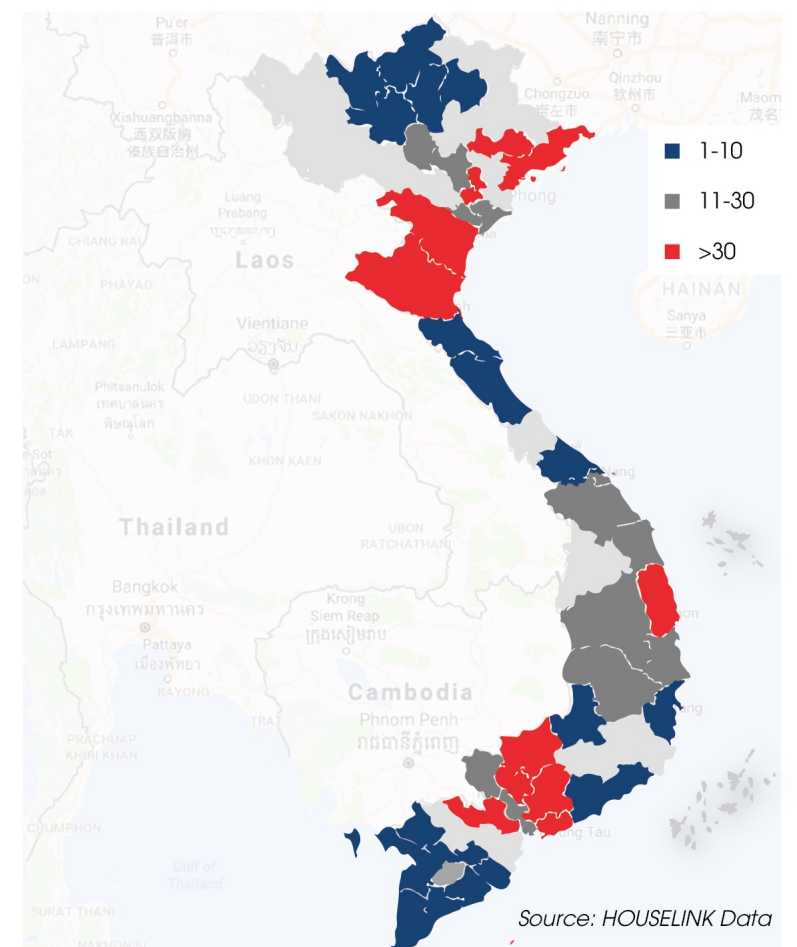

Agriculture and food is the industry with the most industrial construction investment projects, mainly concentrated in the Central and Southern provinces and coming from DDI sources. Additionally, many future projects are still focused on key areas in the Northern and Southern regions. However, each region continues to have its own characteristic investment industries, tailored to the development direction and advantages of each area.

Top 5 industries by number of projects

Source: HOUSELINK data

Map of potential projects preparing for future construction by number of projects

### 4/ Sources of investment capital

Most of the projects preparing for construction are primarily invested by DDI sources. These projects have large scales both in terms of investment capital and project quantity, mainly across all three regions. Following that are projects funded by Chinese FDI and U.S. FDI in terms of total investment capital. However, in terms of the number of projects, there are differences in the investing countries, namely: China, Taiwan, South Korea, and Japan.
